MUHAMMAD HASSAN NADEEM

Software Engineer | Cybersecurity Analyst

Peshawar, Pakistan | +92 321 9086370 | muhammadhassannadeem37@gmail.com

PROFESSIONAL SUMMARY

Software engineering student and aspiring cybersecurity professional based in Peshawar, Pakistan, working where secure software development and security analysis meet. Focused on building secure applications, identifying security weaknesses, designing resilient systems, and turning security knowledge into practical tools. Experienced in teaching cybersecurity and web development, with a professional internship at Khyber Pakhtunkhwa Police. Open to remote & physical collaboration.

EDUCATION

BS Software Engineering *2027*

City University of Science and Information Technology (CUSIT), Peshawar

EXPERIENCE

Intern, Khyber Pakhtunkhwa Police *Professional Internship*

- Placed at the CCPO Office and the SSP Operations Office

Cybersecurity Trainer *Training & Instruction*

Teaching learners how modern systems are attacked and defended, from foundational awareness to hands-on tooling.

- **Topics covered:** Cybersecurity concepts and awareness; network security fundamentals; ethical hacking concepts; practical security tools and techniques

IT Management Officer *Management*

IT management officer at Truly Asia Trade Pvt Ltd.

- Mentoring and technical instruction

MAJOR PROJECTS

SupplyGuard AI *Software Supply Chain Security*

Intelligent software supply chain security platform that investigates third-party dependencies, detects suspicious package changes, and surfaces potential supply chain attack indicators.

Scamvex AI *AI-Powered Threat Detection*

Threat detection platform combining machine learning, domain intelligence, and multiple security analysis techniques to assess potentially malicious websites, URLs, domains, and IP addresses.

VulnScope *AI-Assisted Vulnerability Assessment*

Web application security assessment platform that automates vulnerability discovery workflows, analyzes findings, and supports structured security reporting.

Penetration Testing & Security Assessments *Cybersecurity*

Practical penetration testing, vulnerability assessment, and security evaluation of organizational systems and web applications (engagement details confidential).

Secure Management Systems *Full-Stack Software Engineering*

Custom business management solutions focused on operational efficiency, structured data management, intuitive workflows, and secure application design.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, C++, PHP, SQL
- **Security Practice:** Network Security, Web Application Security, Vulnerability Assessment, Penetration Testing, Security Auditing
- **Security Tools:** Wireshark, Nmap, Burp Suite, Kali Linux
- **Platforms & Workflow:** Linux, Git and GitHub

CORE COMPETENCIES

Cybersecurity Solutions • Software Development • Full-Stack Web Development • Network Design & Security Protocols • Problem Solving & Technical Analysis

CERTIFICATIONS

Cybersecurity Essentials (Cisco) | **Ethical Hacker** (Cisco) | **Networking Essentials** (Cisco)
